Hæmoglobin Scale

The filter paper should be applied to the drop of blood in such a way as to allow the blood to be slowly absorbed by the paper and to permeate it completely.

Comparison with the scale should be made immediately the stain of blood has lost its glossy appearance (due to it being moist), care being taken that the light falls directly upon it, the stain being pressed against the underlayer of the filterpaper. Determination can only take place by daylight.

Normal standard 90-100.

IDOZAN

I D O Z A N

is a colloidal iron solution, neutral, and containing 5 per cent of pure iron (Fe).

One teaspoonful of IDOZAN contains 25 ctgrms. of pure iron (Fe).

One dessertspoonful of IDOZAN contains 50 ctgrms. of pure iron (Fe).

One tablespoonful of IDOZAN contains 75 ctgrms. of pure iron (Fe).

Thus, by means of relatively small doses of IDOZAN it is possible — without any inconvenience to the patient — to give much larger doses of iron than could be accomplished with any other preparation. In cases of anæmia, for instance, one may prescribe to the patient a tablespoonful of IDOZAN three times daily. This dosage means a daily intake of 2.25 grams of pure iron. IDOZAN is extremely palatable.

PACKINGS—

8-oz., 40-oz., and 80-oz. bottles

IDOZAN

IDOZAN

is being regularly prescribed by doctors in fifteen different countries.
